directional)

Consider This  
...

Compound  
Truth Tables

Tautologies  
and Contra-  
dictions

Logical  
Equivalence

Proof by  
Truth Tables

Logic is ...

a **truth-preserving** system of  
inference

- **Truth-preserving:** If the initial statements are True, the inferred statements will also be true
- **System:** A set of mechanistic transformations which are based on syntax alone
- **Inference:** The process of deriving (inferring) new statements from old statements (i.e., finding conclusions based on previous observations)

# Propositional Logic

## Logic

### Propositional Logic

#### And, Or, Not

#### Negation

#### Truth Tables

#### Implication (uni- directional)

#### Implication (multi- directional)

#### Consider This ...

#### Compound Truth Tables

#### Tautologies and Contra- dictions

#### Logical Equivalence

#### Proof by Truth Tables

- A *proposition* is a statement that is either *true* or *false*
- Every proposition is true or false, but its truth value (true or false) may be unknown
- Examples:
  - You are in Discrete Structures (CMPSC102)  $\rightarrow$  True
  - Today is Sunday  $\rightarrow$  False
  - $1 == 2 \rightarrow$  False
  - It is currently raining in Paris  $\rightarrow$  who can say?
  - In Alice's pocket, she has exactly 58 cents  $\rightarrow$  who can say?

## Different from philosophical assessments of truth...

- Philosopher Ludwig Wittgenstein observed, structures have spatial locations, but facts do not
- *The Eiffel Tower could be moved from Paris to Rome, but there is a fact that it is currently in Paris (and nowhere else)*
- "Truth" is something of a system of beliefs (i.e., I believe that it is in Paris, because I have seen it there)

## Logic

### Propositional Logic

#### And, Or, Not

#### Negation

## Truth Tables

### Implication (uni- directional)

### Implication (multi- directional)

### Consider This ...

### Compound Truth Tables

### Tautologies and Contra- dictions

### Logical Equivalence

### Proof by Truth Tables

- A proposition statement:
  - Denoted by a capital letter (i.e., "A")
  - The negation of a proposition statement
    - $\sim A$ : "**not** A"
  - Two proposition statements joined by a *connective*
    - $A \wedge B$ : "A **and** B"
    - $A \vee B$ : "A **or** B"
  - If a connective joins complex statements, parenthesis are added
    - $A \wedge (B \vee C)$ : "A and (B or C)"

# Prepositional Statements

## Logic

#### And, Or, Not

#### Negation

## Truth Tables

### Implication (uni- directional)

### Implication (multi- directional)

### Consider This ...

### Compound Truth Tables

### Tautologies and Contra- dictions

### Logical Equivalence

### Proof by Truth Tables

- $A$  = "It is raining"
  - $\sim A$ : "not  $A$ "
  - "It is **not** raining"
- Composition
  - $A$  = "Peanut butter"
  - $B$  = "Jelly"
  - $A \wedge B$ : " $A$  and  $B$ "
  - A sandwich composed of: *peanut butter* **and** *jelly*
- Either one or the other
  - $A$  = "I will wear a white t-shirt"
  - $B$  = "I will wear a blue t-shirt"
  - I will wear a t-shirt:  $A \vee B$  : " $A$  or  $B$ "
  - I will wear the white **or** the blue t-shirt (this is still true!)

# Propositional Statements

## Logic

Propositional Logic

And, Or, Not

Negation

## Truth Tables

Implication  
(uni-  
directional)

Implication  
(multi-  
directional)

Consider This  
...

Compound  
Truth Tables

Tautologies  
and Contra-  
dictions

Logical  
Equivalence

Proof by  
Truth Tables

- Negation of proposition  $A$  is  $\sim A$
- $A$ : It is sunny.
- $\sim A$ : It is not sunny.
- $A$ : Newton often drank tea.
- $\sim A$ : Newton did not often drink tea.
- $A$ : I am from the planet Zogitron.
- $\sim A$ : I am not from the planet Zogitron. (regretfully)

# Truth Tables

## Logic

(uni-  
directional)

Implication  
(multi-  
directional)

Consider This  
..

Compound  
Truth Tables

Tautologies  
and Contra-  
dictions

Logical  
Equivalence

Proof by  
Truth Tables

- Compound propositional statements are built out of simple statements using logical operations: negations, conjugations (using **AND**'s) and disjunctions (using **OR**'s)
- Determined by *Truth Tables*
  - A table of a combinations of truths using the connectives
  - Truth tables define the truth value of a connective for every possible truth value of its terms

# Basic Truth Table

## Logic

directional)

Consider This  
..

Compound  
Truth Tables

Tautologies  
and Contra-  
dictions

Logical  
Equivalence

Proof by  
Truth Tables

- Conjunction of  $A$  and  $B$  is:  $A \wedge B$

- $A$ : I like art
- $B$ : I like this work of art
- $A \wedge \sim B$ : I like art but (**AND**) I do not like this work of art

## In Python

```
A = True
```

```
B = True
```

```
A and not(B) # False
```

## Remember

We are discussing only the **Logical Truth** of the statements.  
The *meaning* of the combined statements is human insight.

# Logical AND (and its Conjunction)
